RAJAT VERMA

Senior Frontend Engineer | React, Next.js, TypeScript, Angular | FinTech & Payments

New Delhi, India | rajatverma1963@gmail.com | linkedin.com/in/rajat-vrma

SUMMARY

Frontend engineer with **nearly 6 years of experience** building React, Next.js, Angular and TypeScript products across payments, banking, tax, travel and events. **Project Lead** at Innostax, heading a **6-member team** on a US startup's Next.js platform after **two promotions in 3.5 years**. Strongest in payment flows, web performance, cross-browser reliability and **PCI DSS** security fixes, with backend experience in Node.js, Fastify and AWS.

SKILLS

- **Frontend:** React, Next.js, Angular, AngularJS, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
- **Performance & Security:** Lighthouse, code splitting, cross-browser and iOS testing, PCI DSS
- **Payments & Integrations:** Stripe, Ozow, WorkOS, Resend, Sentry
- **Backend & Cloud:** Node.js, Fastify, SQL, AWS (Lambda, EC2, S3, CloudWatch), GitHub Actions, Jenkins
- **Leadership & Practices:** Team lead (6 engineers), pull request reviews, client requirements, Agile, Figma

EXPERIENCE

Innostax Software Labs | Gurgaon — Jan 2022 – Oct 2026
Software Development Engineer 2 (Project Lead) — Jun 2025 – Oct 2026
Software Development Engineer 1 — Jun 2022 – Jun 2025
Associate Software Engineer — Jan 2022 – Jun 2022

Promoted twice in 3.5 years, from Associate Software Engineer to Project Lead. Received Innostax's **Client Hero** (2023) and **Fast Start Champion** (2022) awards.

Pegasus – horse-show management platform for a US startup (Next.js, Fastify)

- Lead a **6-member team** rebuilding version 2 from scratch for a platform serving **1,000–2,000 users**, peaking at **4,000–5,000 during live events**; own client meetings, requirements, pull request reviews and unblocking the team while staying hands-on in development.
- Built a **drag-and-drop stall map editor** so show organisers can lay out and update stall maps for each show themselves in the platform.
- Designed **role-based access control (RBAC)** with a super admin role tailored to the client's needs, so each type of user sees only the data and actions their role allows.
- Integrated **WorkOS** (auth), **Stripe** (payments), **Resend** (email) and **Sentry** (monitoring), and set up **branch-based deployments** across dev/QA, staging and production.

BancStac – payments platform for banks including HNB, DFCC, CBC, SMP and EFTEX (React, Java)

- **Reduced quick web payment failures by 15%** by handling page closes during in-progress payments and cancelling pending polling requests when a step failed midway.
- **Cut page load time by 25%** through code splitting, reusable components, and removing stale assets and unused packages.
- Raised cross-browser compatibility to **95%** and cleared 50–60 usability issues, mostly on iOS, leading to **10% fewer user reports**.
- Built the frontend for **dynamic currency conversion (DCC)** on payment pages.
- Fixed vulnerabilities across **10+ critical modules**, prioritised by severity, from the client's monthly security audits and the third-party **PCI DSS Level 1** certification audit.
- Onboarded EFTEX, a new bank, by handling its complete configuration on the existing architecture; shipped its features behind **feature flags** so other banks can enable them later.
- *Proposed* two security measures to the client: **token fingerprinting** to counter token theft (validate token data on every API call and expire the token on detected changes such as a window resize), and **hybrid encryption** to counter spikes of fraudulent requests.

PlentExchange – white-label tax platform (React, .NET)

- **Architected the React frontend from scratch**, defining the app and folder structure, and built a multistep wizard.
- Rebranded the platform for **two clients** and added client-specific features, including a master export of records and custom analytics.

Other client projects

Travelstart B2B (Angular): moved flight search into a component shared by the B2C and B2B apps and integrated the Ozow payment gateway, helping cut post-launch bug reports by **20%**. **Tava JS** (Node.js, AWS): set up GitHub Actions CI/CD, cutting deployment time by **40%**.

Career Break — Dec 2019 – Dec 2021

WorkFlux Interactive Pvt. Ltd. | New Delhi — Dec 2018 – Nov 2019
Frontend Web Developer (Jun – Nov 2019); Software Engineer Intern (Dec 2018 – May 2019)

- Turned 50+ Figma mockups into responsive HTML, CSS and JavaScript interfaces and built 30+ reusable UI components, contributing to a **20% increase in average time-on-site**.

EDUCATION

B.Tech, Computer Science & Engineering – Mahavir Swami Institute of Technology — 2019
Diploma, Computer Science & Engineering – Guru Nanak Dev Co-Ed Polytechnic — 2016
